

Jayu Industries

Improve your home, Increase your security

Company Profile

We "Jayu Industries" are leading and well known manufacturer and supplier of high quality array of Automatic Gate, Rolling Shutter, Industrial Roofing, Grill Gate, Mild Steel Railings, Industrial Sheds and Mild Steel Windows. We are a Sole Proprietorship Company and always believe in providing the best class products to our valued clients. The fabricated products provided by us are widely demanded in industries, residential & commercial establishments, etc.

These products are fabricated in accordance with global market standards from premium quality raw material and the latest machines. Our offered fabricated products are highly applauded due to their sturdy design, perfect strength, corrosion resistance, easy installation and durability. In line with clients' varied choices, we provide these fabricated products in customized options. We also provide Industrial Fabrication at most nominal rates.

We are a Sole Proprietorship Company and always believe in providing the best class products to our valued clients. The fabricated products provided by us are widely demanded in industries, residential & commercial establishments, etc. These products are fabricated in accordance with global market standards from premium quality raw material and the latest machines. Our offered fabricated products are highly applauded due to their sturdy design, perfect strength, corrosion resistance, easy installation and durability. In line with clients' varied choices, we provide these fabricated products in customized options. We also provide Industrial Fabrication at most nominal rates.

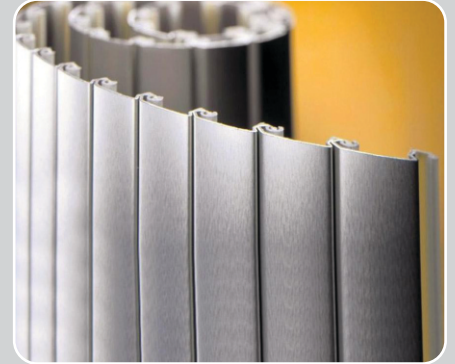

We are a quality oriented firm, all our efforts are directed in providing a defect-free range of products to our valuable clients. We use optimum-grade raw materials sourced from the most reliable sources of the market, to manufacture our range of the products. The technocrats appointed by us employ advanced technologies and high-grade machines in the manufacturing process of our products. Moreover, we have hired an experienced quality controllers team for stringently testing our entire range. These team checks the quality of our range of the products on various parameters at our technological updated quality-testing laboratory.

Rolling Shutter

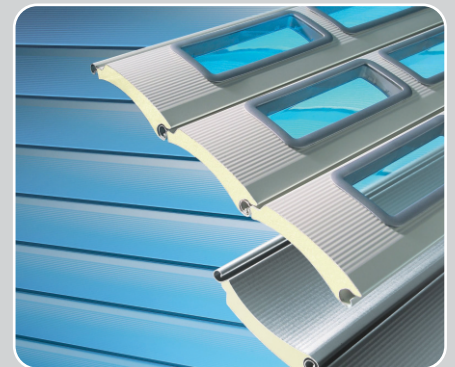

Motorized Rolling Shutters

Aluminium Rolling Shutters made of design patented extruded double wall aluminium profiles provide durability, efficiency and functionality while being light weight as well as robust. Aluminium Rolling Shutters can be installed in areas where it would be exposed daily to the atmospheric conditions as it is corrosion free.

Pull Push Rolling Shutter

Being a customer oriented firm, we are the engrossed in providing a premium quality range of Push Pull Rolling Shutter. Our offered shutter is perfectly manufactured making use of quality approved raw material and modern techniques by our highly skilled professionals. The shutter provided by us is available in several sizes as per the requirements of the clients at industry leading price. This shutter is highly demanded in the market for its easy installation and corrosion resistance.

Perforated Rolling Shutter

Being a customer oriented firm, we are the engrossed in providing a premium quality range of Push Pull Rolling Shutter. Our offered shutter is perfectly manufactured making use of quality approved raw material and modern techniques by our highly skilled professionals. The shutter provided by us is available in several sizes as per the requirements of the clients at industry leading price. This shutter is highly demanded in the market for its easy installation and corrosion resistance.

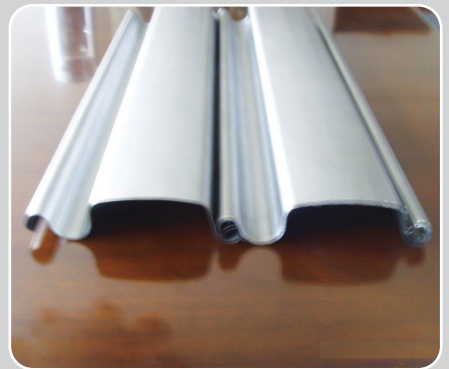

◆ Polly Carbonate Rolling Shutter

Polycarbonate strips while offering transparency are extremely secure making it burglar proof. Polycarbonate Rolling Shutters are manufactured using interlocked high impact polycarbonate moulded lenses combined with security aluminium tubings. The application of Polycarbonate shutters ranges from protecting shop fronts, concealed doorways, main entrances of shopping centers and cash dispensing areas.

◆ Galvanised Rolling Shutter

Galvanised Insulated and Non Insulated Rolling Shutters are designed for a variety of industrial, warehouse, loading docks and commercial uses. They combine aesthetically pleasing appearance with energy efficiency, robust construction and reliability. The shutters are custom made to fit any openings and are ideal for situations where sideroom is at a premium and security is required.

◆ Aluminium Rolling Shutter

Aluminium Rolling Shutters made of design patented extruded double wall aluminium profiles provide durability, efficiency and functionality while being light weight as well as robust. Aluminium Rolling Shutters can be installed in areas where it would be exposed daily to the atmospheric conditions as it is corrosion free.

Automatic and Manual Gate

◆ Sliding Gate

Motorized sliding gates (conventional) are gates which use a ground mounted track for the gate wheels to move on. Tracked sliding gates can have larger opening widths. A pedestrian gate can be combined with these type of gates or a separate pedestrian gate can be built. Company can produce motorized sliding gates as per client's requirements.

◆ Telescopic Sliding Gate

Telescopic Sliding Gates combine the handiness of conventional sliding gates while contributing key benefits. They can substantially decrease the back run required as compared to a single leaf gate. The gates are made-up to make it possible to achieve an extreme clear as compared to a conventional sliding gate. Telescopic Sliding Gates are perfect for sites where extreme opening is compulsory and back run is limited due to structural situations Speed of the gate gets boosted.

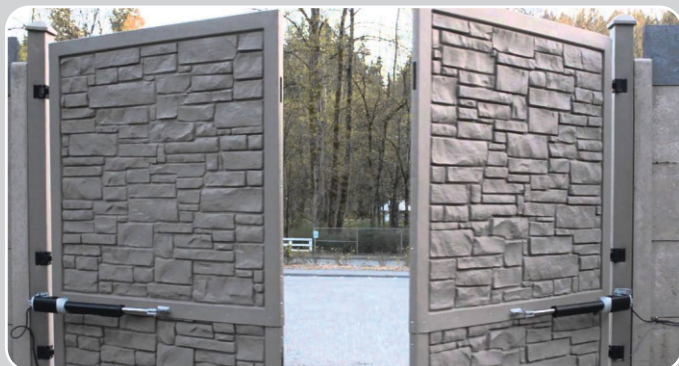

◆ Cantilever Sliding Gate

Cantilever Gate system is a arrangement for sliding gates which is suitable for safeguarding industrial, commercial and public conveniences, where the road surfaces are rough or sloping. The gate is made-up of robust steel and works on a modest principle of 2 heavy duty carriages grouted and a massive galvanized track that rolls on the carriages, thus avoiding the need for a bottom track.

◆ Swing Gate

Automatic swing gates by Jayu Industries are fabricated to provide safety, suitability and defense against unauthorized invasion. Artistically fabricated these gates are made with square pipes encased in a pipe frame tailored to suit the client's necessities and are finished with spray painting.

◆ Retractable Gate

Retractable Gates offered by Gandhi Automations stands out amongst others because they blend flawlessly with its surroundings. They not only match the building installed with the gates, but are a piece of eye-catching architectural work with high functionality and artistic value. It is said that when technology progresses to the highest stage, it climbs into art. The premium combined head unit is the result of such a exclusive combination of technology and art. This state-of-the-art head unit is made of high accuracy, high forte plastic and weight improved materials. Incorporated with the maximum advanced features, plus intelligent control circuit, a world-leading spiral clutch technology and deluxe details the retractable gates lead the way into the acumen age in the industry. It is harmless, consistent, energy-saving, and offers excessive horsepower and starting stability. Above all, it can even task normally during a power failure.

Frame Structure

Most steel construction is done with a type of steel called mild steel. Mild steel is a material that is immensely strong. This immense strength is of great advantage to buildings. The other important feature of steel framing is its flexibility. It can bend without cracking, which is another great advantage, as a steel building can flex when it is pushed to one side by say, wind, or an earthquake. The third characteristic of steel is its plasticity or ductility. This means that when subjected to great force, it will not suddenly crack like glass, but slowly bend out of shape. This property allows steel buildings to bend out of shape, or deform, thus giving warning to inhabitants to escape. Failure in steel frames is not sudden - a steel structure rarely collapses. Steel in most cases performs far better in earthquake than most other materials because of these properties.

However one important property of steel is that it quickly loses its strength in a fire. At 500 degrees celsius (930 degrees F), mild steel can lose almost half its strength. This is what happened at the collapse of the World Trade Towers in 2001. Therefore, steel in buildings must be protected from fire or high temperature; this is usually done by wrapping it with boards or spray-on material called fire protection.

Tensile Fabric Structure

Our organization is instrumental in offering superior quality **Tensile Fabric Structures**. These products are manufactured using optimum grade raw material, which are procured from the most leading vendor of the market. Products we offer are manufactured under proper supervision and guidance of skilled and experienced experts to get premium quality output.

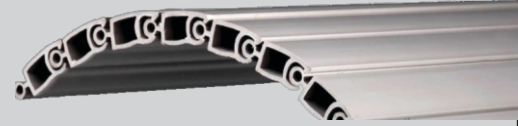

Features:

- Ability to withstand in severe climate
- High durability
- Optimum-grade

Specifications:

- Type: PVC Coated Fabric
- Structure: Tensile Fabric Structure
- Size: Customized
